

Extend and enrich Stack Overflow for Teams with custom integrations

Personalize your instance using our read/write API

Flexibility for your organization

Stack Overflow for Teams API allows you to integrate your knowledge sharing platform with other third-party or home-grown applications beyond our out-of-the-box integrations.

Tailor the platform to drive productivity

The best place to access knowledge and enable cross-team collaboration is in a centralized location. Move long-form content into Stack Overflow for Teams from other sources, and streamline the natural workflow to help your organization stay heads down.

Talk to the experts

Our Customer Success team can help guide your implementation. We will work together to provide recommendations when building against the API to help meet your objectives while preserving your purpose-built community within Stack Overflow for Teams.

Public facing documentation can be found [here](#).

Examples of integrations using the Stack Overflow for Teams API:

- ✓ Enable questions or long-form content to be submitted or imported from other internal tools
- ✓ Company-specific success metrics within an analytics dashboard
- ✓ Relevant Questions, Answers, and Articles display within an internal helpdesk
- ✓ Search indexed Questions, Answers, and Articles
- ✓ Identify experts across projects or topics
- ✓ Personalized developer portal summarizing contributions and actions to take
- ✓ Notifications to home-grown chat application

*Additionally, the Enterprise tier of Stack Overflow for Teams includes **webhooks** to support event based custom integrations that fit your business needs.*

Streamline the developer workflow with our existing integrations
