Integrations

- 1. Out-Of-The Box Integrations**
Slack, Microsoft Teams, Jira Cloud Hosted, GitHub Enterprise
- 2. Webhooks**
Webhooks can be used to allow Stack Overflow Enterprise to notify other services of activity on the community.
- 3. Read/Write API**
Site Admins can customize and extend Stack Overflow Enterprise using the Enterprise Read/Write API
(Further details can be found at </api/docs>)

Tags and SMEs

Uploading tags

Site Admins can upload tags in to the system one-by-one or via csv upload

Subject Matter Experts

Site Admins can assign Subject Matter Experts to tags

Custom awards

Site Admins can pick one of several pre-designed images to award users for accomplishments

Private Teams on Enterprise

Best Practices:

Stack Overflow is meant for widespread knowledge sharing. Most Q&A should be available for all users in the General Area.

Use Cases:

Projects involving NDA access, legal discussions or buckets of Q&A considered off-topic for the general user population

Only Site Admins can Create Private Teams

Site Admins can exit Private Teams after creating them as long as there is one other Team Owner

Teams sync

Members can be read from an LDAP server or from an external URL.

Members can also be pushed via API.
